

30th January 2020

A LOUDSPEAKER LEGEND REBORN

Monitor Audio is proud to announce the 6th generation of its award-winning Bronze Series.

The new loudspeakers feature a complete upgrade in both performance and build quality to create Monitor Audio's best Bronze Series yet.

The new cabinet design features a modern profile and a separate contrasted baffle complemented by a choice of contemporary finishes. The new drivers with Damped Concentric Mode (DCM) technology have been intricately engineered to optimise the audio experience. They also pair with the tweeter's carefully designed Uniform Dispersion (UD) Waveguide to integrate seamlessly into the architecture of the baffle.

Since its launch in 2000, the multi award-winning Bronze Series has set the standard as a class leader and today has thousands of satisfied owners across the globe. The 6th generation builds upon a rich heritage to create a speaker set to delight with its superior build quality and powerful yet detailed performance.

The new Bronze Series features a choice of eight models, including a Dolby Atmos® enabled speaker, all of which have been designed to please any music or movie lover. With a choice of four finishes and a sleek form, each of the speakers look great wherever they are placed in a room.

Monitor Audio's Technical Director, Michael Hedges, said, *'I am truly proud of what we have managed to achieve with the 6th generation of our Bronze Series. The performance and build quality are beyond what one would normally expect at this price point and I am certain that our customers will love them.'*

Bronze Series
