

# HDBT<sup>ASE</sup> SUPPORTING 4K HDR

## PRISLISTA

Giltig från 1 juli, 2018

FOUNDED IN MELBOURNE, AUSTRALIA.

Blustream is the audio visual industry's award winning option for advanced HDMI distribution. Our products have been designed and engineered by a global team of AV specialists with over 30 years experience. Research highlighted the market need for an AV distribution brand that could deliver both industry leading performance and most importantly reliability. This has resulted in us developing a range of HDBaseT™, Video over IP and HDMI solutions that deliver seamless AV integration within any installation environment. As an official HDBaseT™ adopter and alliance member, Blustream is firmly positioned at the forefront of this advanced technology. Through integration of the latest pioneering chipsets our engineers have developed the world's most innovative range of AV distribution products.

## Why Blustream?

- ➔ All products support 4K UHD resolutions
- ➔ All extenders offer bi-directional PoH / PoE
- ➔ Key player in the rapidly evolving Video over IP platform
- ➔ Web GUI access and App control for all matrix / IP systems
- ➔ Integration with all major third party control systems
- ➔ Next-day Europe wide delivery
- ➔ 2 year manufacturer warranty
- ➔ Pioneering new 4K 4:4:4 and HDR solutions
- ➔ Integration of ARC functionality via HDBaseT™ HDMI and Optical
- ➔ Audio breakout integrated into the majority of products
- ➔ Advanced EDID management and IP / RS-232 integration
- ➔ Industry leading training and technical support services
- ➔ Extensive road map for new product development
- ➔ Over £1M of inventory in Europe

# UNDERSTANDING THE Technology

**HDBaseT**

HDBaseT™ transmits converged uncompressed full HD digital video, audio, 100 BaseT Ethernet, Power-over-Ethernet (PoE or PoH) and various control signals through a single Cat5e/6/7 cable over distances of up to 100 metres.

**VIDEO  
OVER  
IP**

Video over IP - distribute resolutions up to 4K HDR over an IP infrastructure with visually lossless reproduction, minimal latency, fully flexible I/O structure, and virtually limitless cabling distances.

**CSC**

Colour Space Conversion reduces the data rate of the HDMI signal by converting the colour space from 4:4:4 or 4:2:2 to a lower format. The signal is then re-built at the receiver to add back in the adjusted information at the point of transmission.

**4K**

A 4K screen has four times the number of pixels than your current Full HD 1080p display so the clarity of the image is much more superior and detailed.

**HDCP 2.2**

HDCP2.2 is the next generation of copy protection required to allow the playback of the latest 4K source media.

**4K  
60Hz 4:4:4**

4K60 4:4:4 is one of the most complex 4K HDMI signals that can be sent using HDMI2.0. This represents 17.8Gbps of data transfer, close to the 18Gbps limit of HDMI2.0. Where you see this tile, you can be sure the equipment will handle the signals being sent from your 4K source devices.

**PoH**

Blustream extenders and matrices feature PoH. This feature allows you to power the remote HDBaseT™ receiver/s via the CAT cable, removing the need for a power supply.

**HDR**

HDR (or High Dynamic Range) expands the ability of a display to show a wider and richer range of colours, much brighter whites, and much darker blacks.

**AUDIO  
BREAKOUT**

HDMI carries both video and audio to our screens. You can extract the audio element of the HDMI signal to feed into your home stereo / audio system for a better quality sound experience.

**HD  
AUDIO**

HD audio is featured on many sources in formats such as Dolby Digital and DTS. Blustream products are compatible with the latest HD audio resolutions.

**ARC**

Audio Return Channel (ARC) works by transmitting the audio signal the opposite way down a HDMI cable, connecting your display directly to an amplifier for better sound reproduction.

**EDID**

Extended Display Identification Data. When a source is connected to a screen a digital 'handshake' happens. This handshake ensures that your screen displays your media with the best possible video and audio quality available.

**PIP**

PICTURE IN PICTURE

Picture in Picture allows for a secondary source to be overlaid onto a primary video feed enabling the user to watch simultaneous feeds on one screen.

**VIDEO WALL**

A combination of multiple screens can be made into an array for the viewing of one large media image across multiple screens.

**LINE LEVEL  
VOLUME  
CONTROL**

Pre-amp line level volume control allows for the volume of an audio output to be altered using third party control systems or the Web GUI for the associated product.

**WEB GUI  
GRAPHICAL USER INTERFACE**

The new Blustream V2 products feature a Graphical User Interface via an in-built web-server. This feature allows users to set-up and control their matrix from a mobile device or computer connected to the same network.
